Mission Statement

Knowing that most of the degradation of earth, land, water and air can be repaired by trees, our mission is to instigate and inspire the planting of as many trees as possible on planet earth as quickly as possible with the maximum survival, growth rates and simplicity of care.

Trees for Earth products have many uses including forestry, orchards, small crops, civil and domestic applications as well as landscaping and regeneration projects.

About

Trees For Earth have designing tree care products from experts in the field. We manufacture our products from the highest quality materials sourced within Australia not from overseas. **Trees For Earth** also inspire and educate people in best tree planting practice from soil preparation to after tree care.

History

In 2000, Trees For Earth was established and has continued to refine the art of tree planting by expanding on a successful polyculture tree planting strategy and incorporating soil health principles utilising mineral and microbe balancing. As a result, Trees For Earth has developed the unique Plant Pink Tree Planting System that is achieving up to 97% tree survival rates in commercial timber plantations and other nursery and regeneration projects.

Products

Plant Pink Tree Guards™ - *Plant pink quality tree guards.*

Plant Pink Hardwood Stakes™ - *Quality hardwood stakes for the plant pink planting system.*

Plant Pink Mulch Weed Mats™ - *A weed mat that promotes growth and reduces losses.*

Tree-Starter™ - *Organic Complete Tree Nutrition.*

Tree-Booster™ - *The ultimate tree production booster.*

Tree-Tonic™ - *A unique formulation of natural growth promotants to enhance growth as well as aide in stress recovery.*

Herbi-Safe™ - *A herbicide adjuvant to promote beneficial microbe growth.*

Tree Planting Gel™ - *A Unique planting gel designed to increase survival rates.*

The Plant Pink System

To ensure exceptionally high survival rates of tree seedlings, Trees For Earth recommend the complete Plant Pink Tree Planting System. The 8 steps are below:

Step 1. Identify compaction layers and deep rip appropriately using a Yeomans plow to open up the soil.

Step 2. Mark out tree spacings according to tree type and habitat goal

Step 3. Remove all grass using herbicides (with **Herbi-Safe**) within 1m of the planting holes or use heavy mulch.

Step 4. Dig holes deeper than the pot making sure the hole edges are not smooth and at least 300mm round to allow for root expansion.

Step 5. Place 200gms (1 cup) of **Tree-Starter** into the planting hole.

Step 6. Dip tree seedling roots (preferably tube stock) into a **Tree-Tonic** solution then plant just covering the root ball, leaving a depression to hold water. Leave a depression around the tree so it can hold 10L of water. Water in **Tree-Tonic** to limit stress and feed soil biology.

Step 7. Put down a **Plant Pink Mulch Weed Mat** and setup a **Plant Pink Tree-Guard**. Place dry forest mulch (preferably hay) around the outside of the **Tree-Guard**

Step 8. 1 After 12 months fertilise each tree with 400g (2 cups) of **Tree-Booster** around the drip line to boost growth.

Why Pink?

Visible light can be split into a spectrum of colours. Green leaves absorb light from the red fraction to drive photosynthesis. Research has demonstrated that the colour pink reflects and focuses the red fraction, concentrating this photosynthetic energy to enhance plant growth. (Other colours are available on request)
